Rf security system

Radiofrequency security door Clothe market security door (RF005)

Product description

Size: 158 * 43 *7(the unit cm.)

Detection door distance: 1.2 meters (soft label) - 1.8 meters (hard tags)

single on both sides of a total of 1.6-2.4 meters.

Material: Aluminium profile

Characteristics:

1. DSP digital processing technology, digital signal processing, the use of high speed digital to analog converter, multiple sampling technology, big big improve the system detection rate, alarm accuracy high, stable performance.

2. Soft hard label operation method choice effectively distinguish.

3. Identity identification technology: in emission modulation editing identity information identification code, different traditional frequency hopping.

4. Advanced pulse AGC technology, and at the same time, double screening AGC adaptation ability is stronger.

5. The main function by DSP chip and intelligent application software control.

6. High permeability filter enhance the ability to resist electric field interference.

7. Advanced the wrong frequency technology, realization near distance is not online, avoid similar products interference.
